HIGH-MU TWIN TRIODE

9-Pin Miniature Type

TENTATIVE DATA

RCA-12AZ7 is a general-purpose high-mu twin triode of the 9-pin miniature type intended for a wide variety of applications in vhf television receivers including its use as a cathode-drive amplifier and frequency converter.

This tube has separate pin terminals for each cathode to provide flexibility of circuit arrangement, and an amid-tapped heater to permit operation from a 12.6-volt/0.225-ampere or 6.3-volt/0.45-ampere supply.

OPERATING CONSIDERATIONS

The maximum ratings in the tabulated data for the 12AZ7 are working design-center maximums established according to the standard design-center system of rating electron tubes. Tubes so rated will give satisfactory performance in equipment designed so that these maximum ratings will not be exceeded when the equipment is operated from ac or dc power-line supplies whose normal voltage, including normal variations, falls within ± 10 per cent of line-center voltage value of 117 volts.

Devices and arrangements shown or described herein may use patents of RCA or others. Information contained herein is furnished without responsibility by RCA for its use and without prejudice to RCA's patent rights.
